

METHOD AND DEVICE FOR THE DIAGNOSIS AND THERAPY OF
CHRONIC HEART FAILURE

ABSTRACT

- 5 Method and device for the diagnosis and therapy of chronic heart failure
comprising continuous monitoring of the patient and continuous determination of
significant decompensation parameters during a sample period of normal patient
life, recording the data determined, continuously monitoring these data during
therapy, comparing the memorized data with those determined during the same
10 time span of the sample period and comparing the duration of periods in which
decompensation is present with the total duration of those periods during which
decompensation is absent or conforms to that determined during the sample
period.
